

Shaping Ecosystem-Based Fisheries Management

Jochen Depestele, Feedback from the
scoping workshop on 3 February 2022

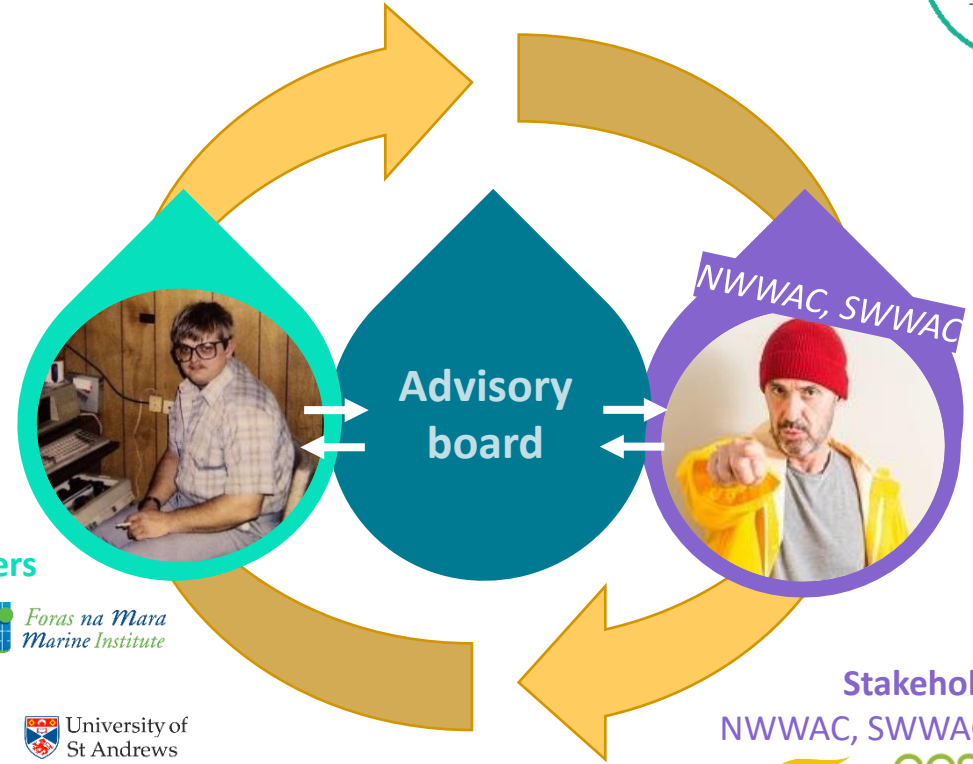

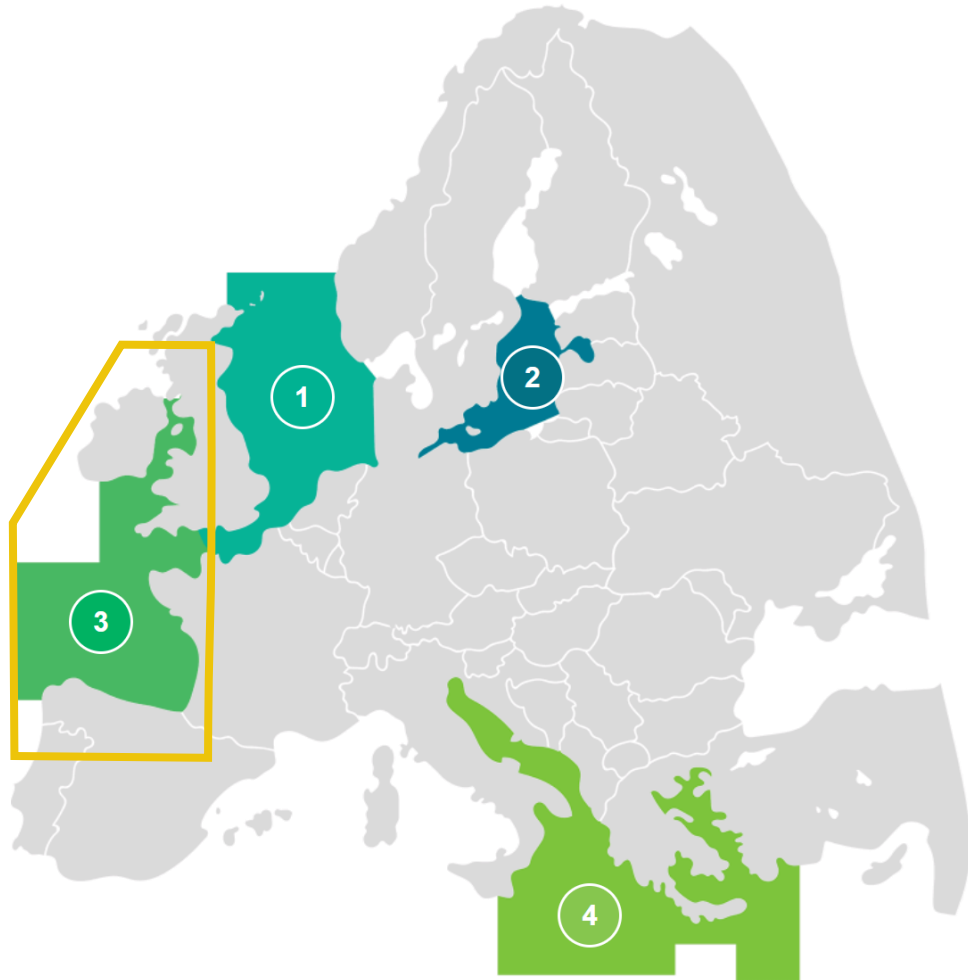

SEAWise has received funding from the European Union's Horizon 2020
research and innovation programme under grant agreement No 101000318

H2020 project. 4 regions.

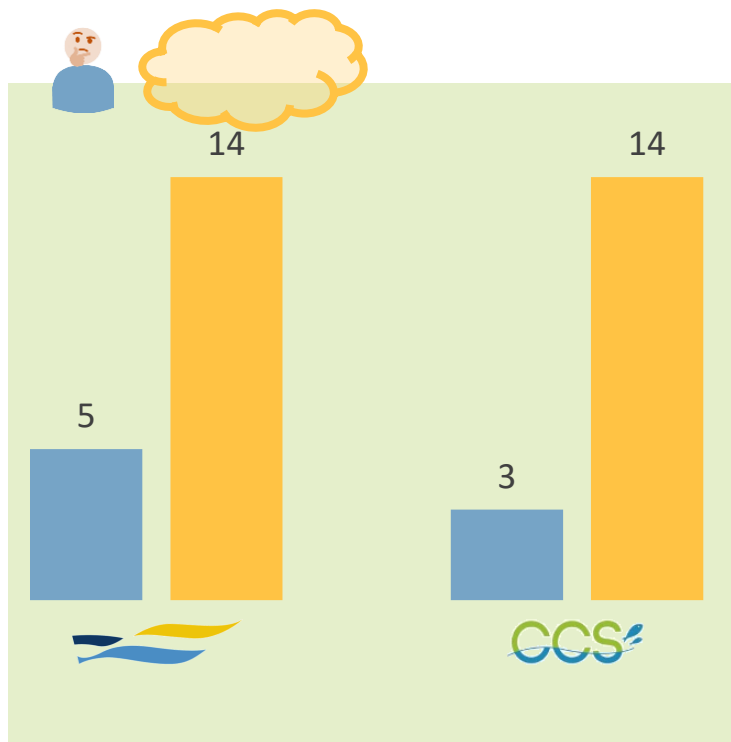

24 partners. 1 advisory board. 6 ACs.

4 years. 1 approach.

Advisory Board
Ernesto Penas-Lado, Mark Dickey Collas, Elisabetta (Bee) Morello, Javier Garat, Martin Pastoors, Antonia Leroy, Magaret (Peg) Brady, Athanassios Tsikliras, Eva Plaganyi

36 respondents in the WW

SCOPING EBFM

Scoping EBFM topics

SCIENTISTS

Top 5 across regions & stakeholders

- Climate change
- Windfarms
- Employment
- Small-scale fisheries
- MPAs

WW specific items

Social & Fisheries topics

(Coastal) economics

Spatial management
Fisheries revenues

Coastal communities
Employment
Pollution
TAC

Ecological topics

Marine mammals
Bycatch
Species interactions

Biodiversity
Ecosystem resilience
Benthic habitats

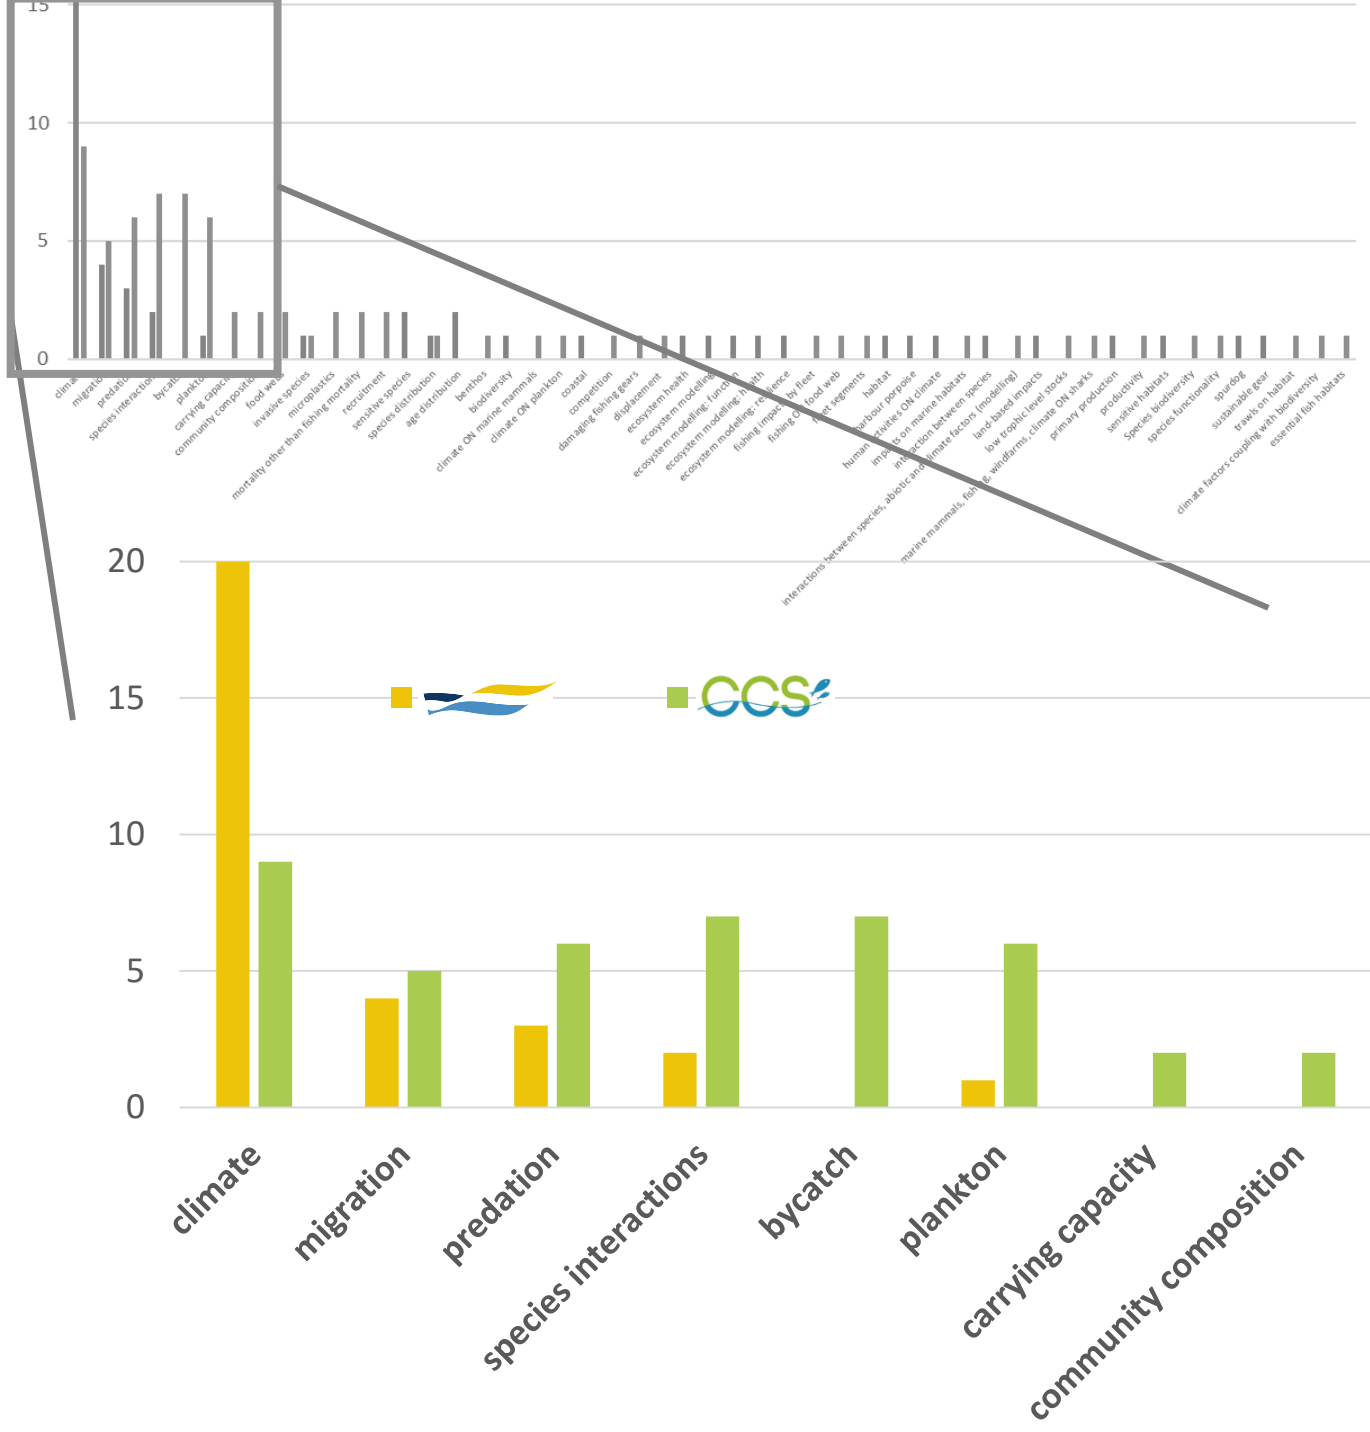

SCOPING EBFM: 77 social items

SCOPING EBFM:

51 ecological items

(excl comm spp)

List of commercial and non-commercial species

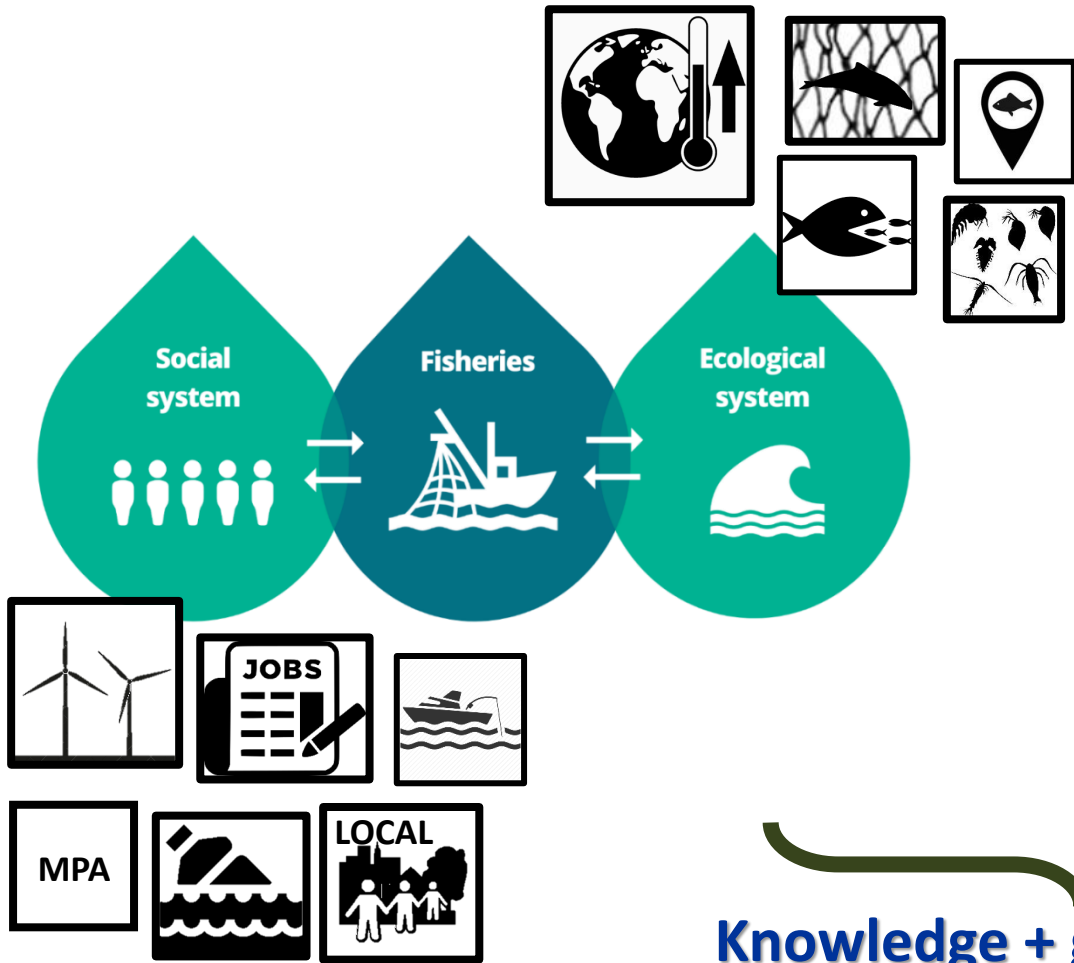

Bold species: mentioned ≥ 4 times

TOP 20 SPECIES			
cod	9	1	
seabass	5	1	
sole	4	2	
crabs	2	2	
haddock	4		
hake	1	3	
Nephrops	3	1	
sardine		4	
squid	4		
elasmobranchs	2	1	
octopus	1	2	
shrimp	2	1	
anchovy		2	
flatfish	2		
gadoids	2		
monkfish	2		
pollack	2		
red mullet	2		
tuna		2	

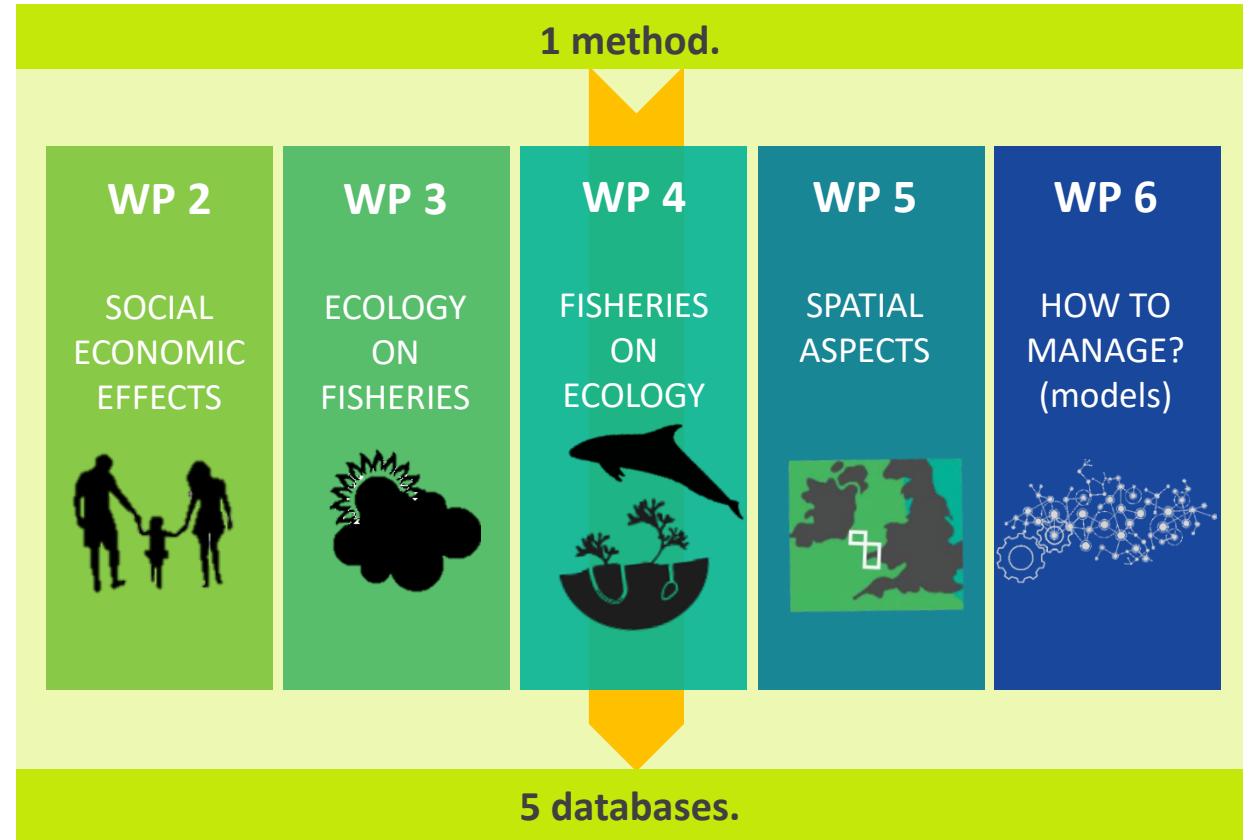

ALL SPECIES			
marine mammals	2	6	
PET species	2	4	
seabirds	3	3	
benthos	1	3	
sensitive species		4	
cetacean	3		
plankton	3		
PET spp	1	1	
sprat	2		
basking shark		1	
elasmobranchs		1	
fodder fish	1		
porbeagle shark		1	
sandeel	1		
seamounts, canyons		1	
turtles	1		

SCOPING & REVIEWING EBFM

Scoping EBFM topics

Systematic reviews

Knowledge + gaps for EBFM

Addressing gaps in SEAWISE?

WP 2

To identify studied

- Social & Economic indicators
- Fisheries management measures

Screening 1399 studies → 187 retained
 WW = 45

Quantitative variables

- Landings (volume & value)
- Fishing effort (days at sea, number of vessels)
- Costs (fuel, operational, labor...)
- Profit
- Fish price

Qualitative variables

- Economic performance
- Sustainability-resilience
- Compliance
- Capacity
- Fleet efficiency
- Social equity

Management

- Effort control
- TAC
- LO
- MPA
- Quota

WP 2

SOCIAL ECONOMIC EFFECTS

MPAs
 Small-scale fisheries
 TACs

Knowledge + gaps for EBFM

Employment
 Coastal communities
 Food security

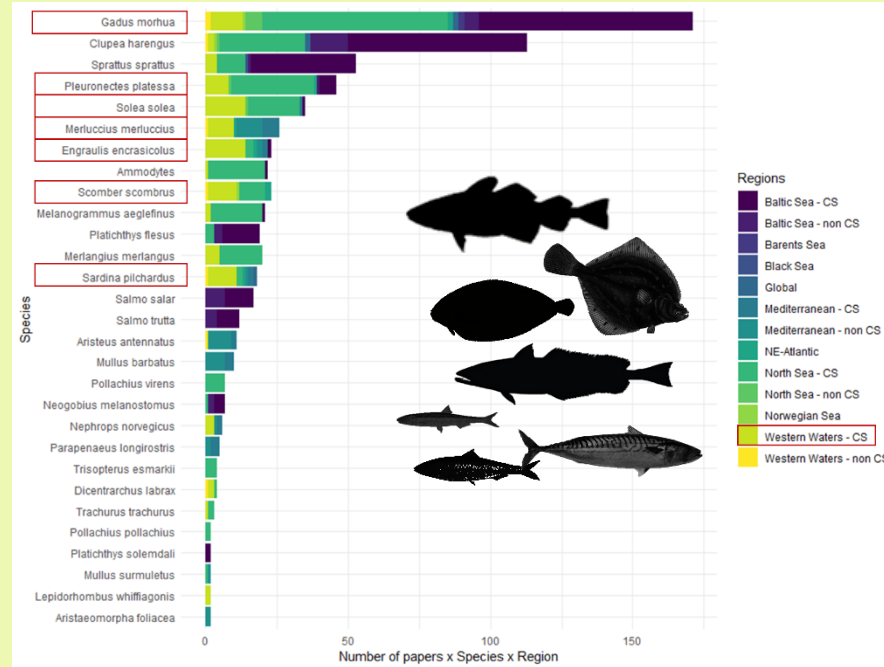

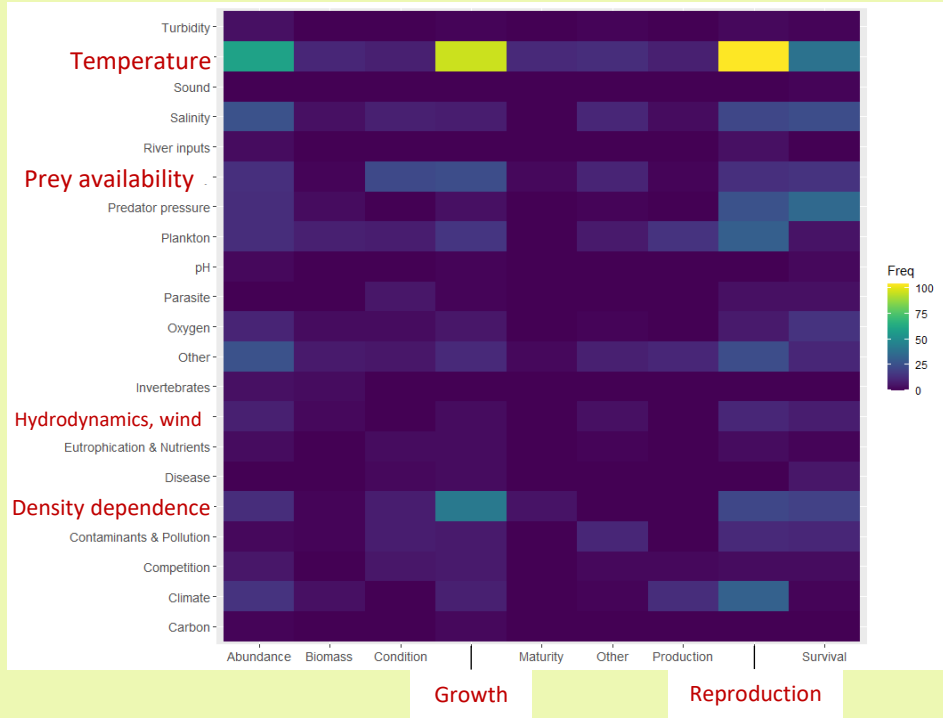

WP2 incl.
 T2.2 economic indicators
 T2.3 social indicators
 T2.5 health aspects of fish

WP 3

Impact of the environment on productivity of commercial species across Europe

- What are key drivers?
- Which processes do they impact?

Screening 2050 studies → 516 retained
WW = 80

WP 3
ECOLOGY ON FISHERIES

Climate change
temperature, salinity
Plankton
Species interactions

Knowledge + gaps for EBFM

Nutrients, pollution
Habitat change (WP5)

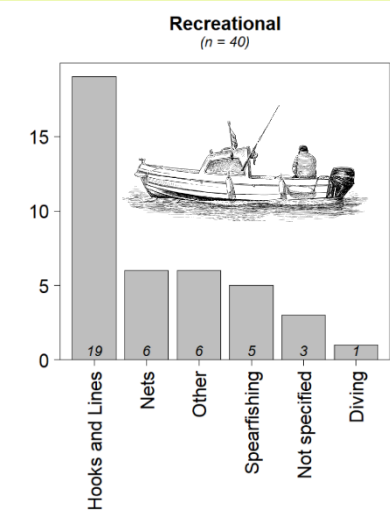

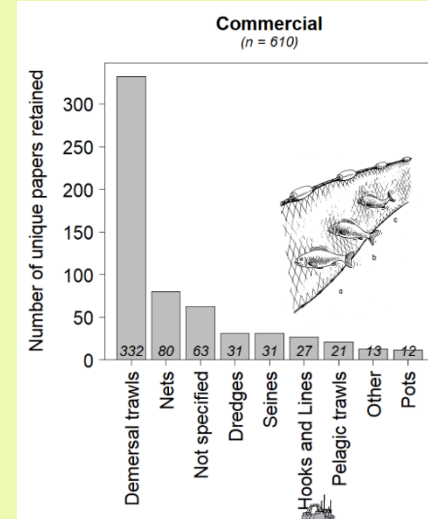

T3.2: recruitment
T3.3: fish growth (e.g. seabass)
T4.4 food web, nutrient flow
T5.4 Habitat productivity

WP 4

To map available knowledge and evidence of impacts of commercial and recreational fisheries on key species and habitats across European sea basins

Screening 2569 studies → 549 retained
WW = 73

WP 4
FISHERIES ON ECOLOGY

Benthos, teleost fish
Marine mammals,
Seabirds

Knowledge + gaps for EBFM Litter

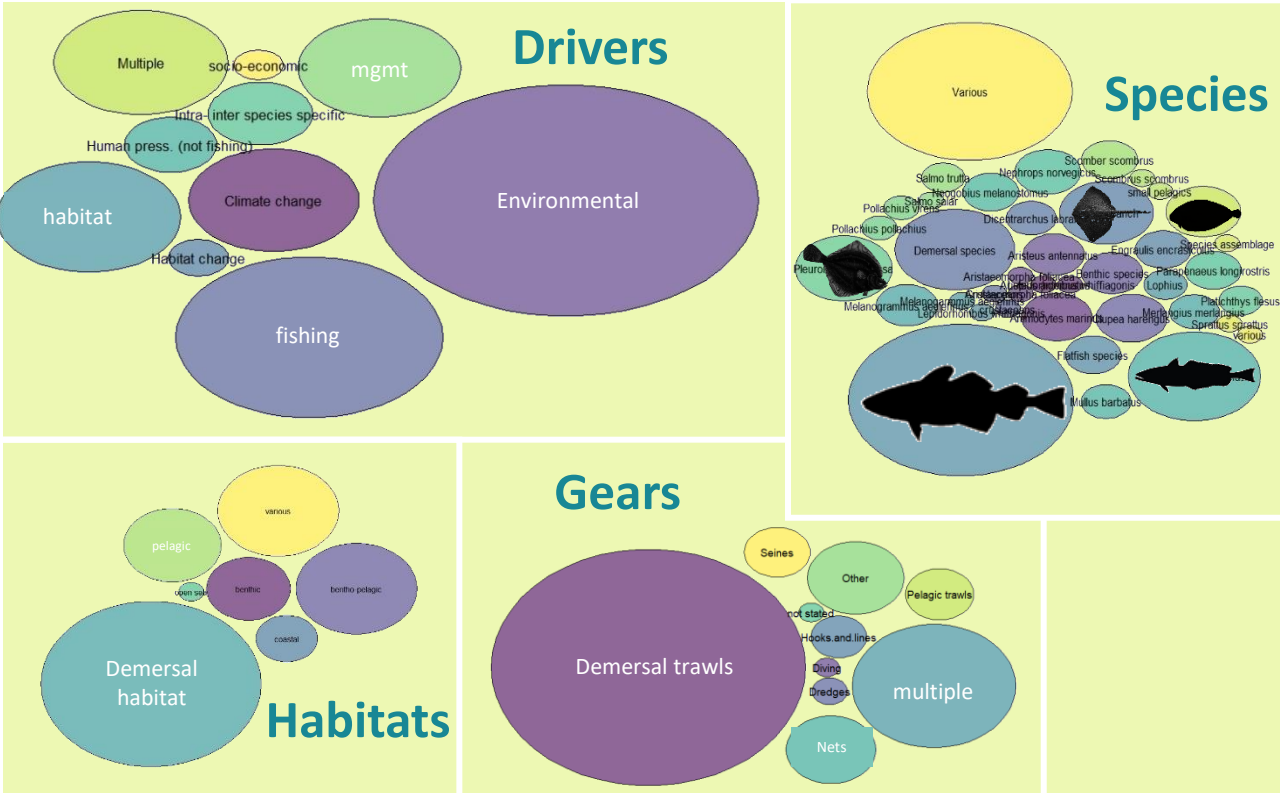

T4.5: litter

WP 5

To investigate

- Spatial aspects of fisheries and ecology of commercially fished stocks
- Drivers of spatial distribution

Screening 1049 studies → 934 retained
WW = 62

WP 5
SPATIAL ASPECTS

- Environmental conditions and distribution of fish
- Distribution of fisheries and other human activities

Knowledge + gaps for EBFM

- Effect of
- Spatial management measures on fisheries
 - Habitats on species

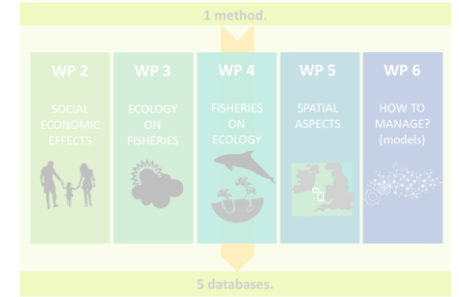

WP5: spatial aspects of fish & fisheries, incl other human act's
WP6: management models

End-user driven advice

Where are we now?

ANNEX 1

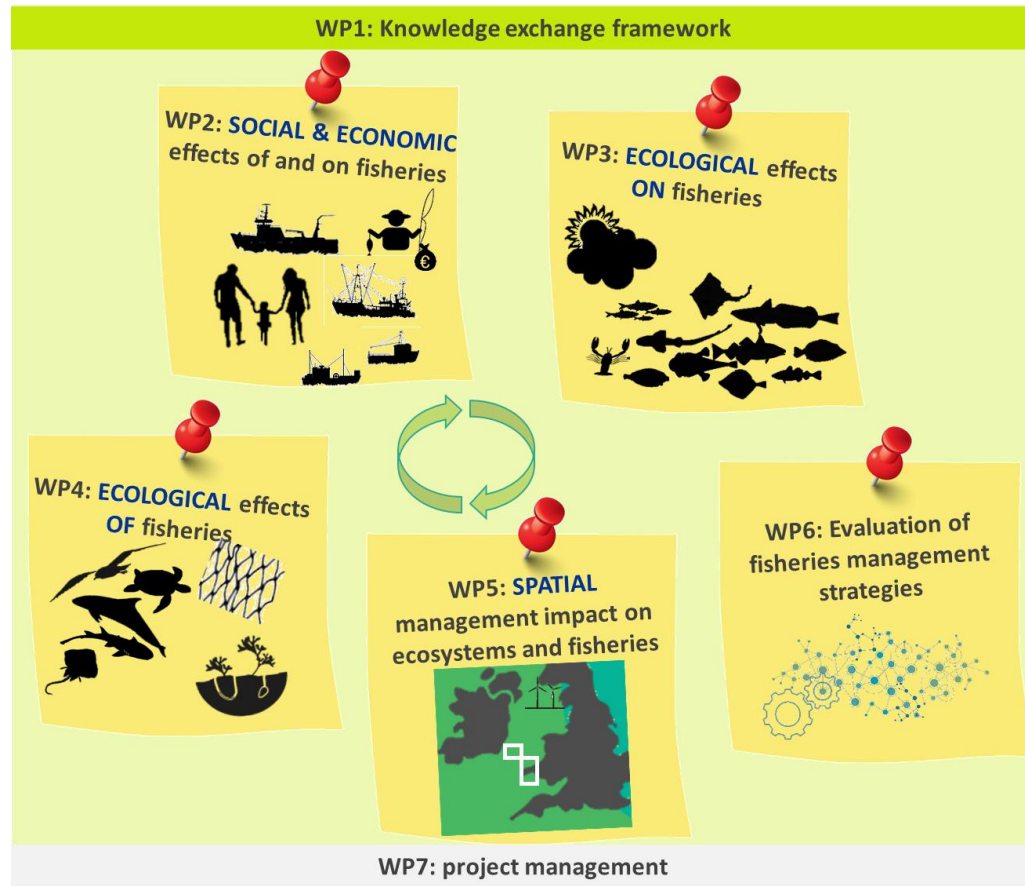

Shaping EBFM

	Management			Legislative framework	
	EBM Ecosystem Based Management		Fishing fleets 	Impacts of all sectors on ecosystem components 	CFP, MSFD, HD, BD, WFD, MSPD etc.
	EBFM Ecosystem Based Fisheries Management		Fishing fleets 	Effects of fishing, climate and Mortality on fished stocks and other ecosystem components 	CFP, MSFD
	EAFM Ecosystem Approach to Fisheries Management			Target species plus climate, mortality from predators 	CFP
	SS Single species Approach to Fisheries Management			Target species only 	CFP

ANNEX 2

WP details

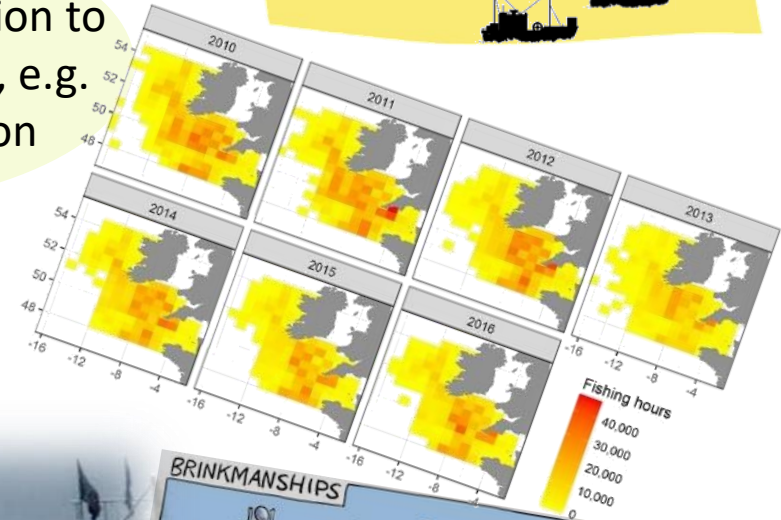

WP2 = social and economic effects

Health benefits & carbon footprint

Fishers behavior in relation to management measures, e.g. spatial effort allocation

Social consequences of management measures, incl. Brexit, development of new social indicators

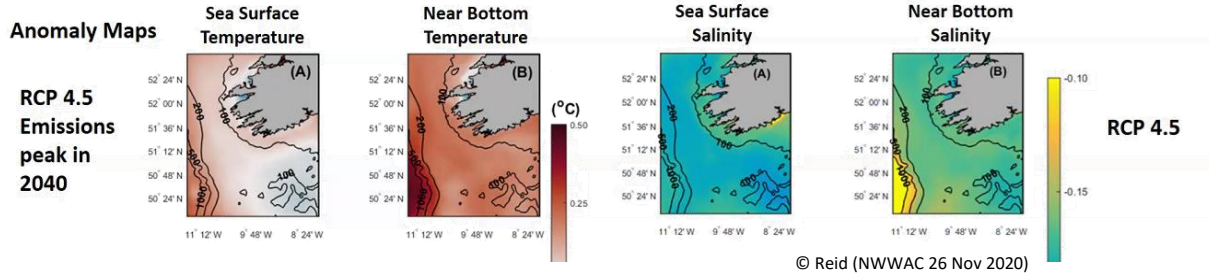

© Hallström et al (2019)

- Cods, hakes, etc.
- Lobsters and shrimps
- Mollusc/shellfish
- Flatfishes
- Freshwater white fish
- Other
- Herrings, mackerels, etc.
- Salmon, trout

WP3 = fish productivity

Warmer and fresher under climate change

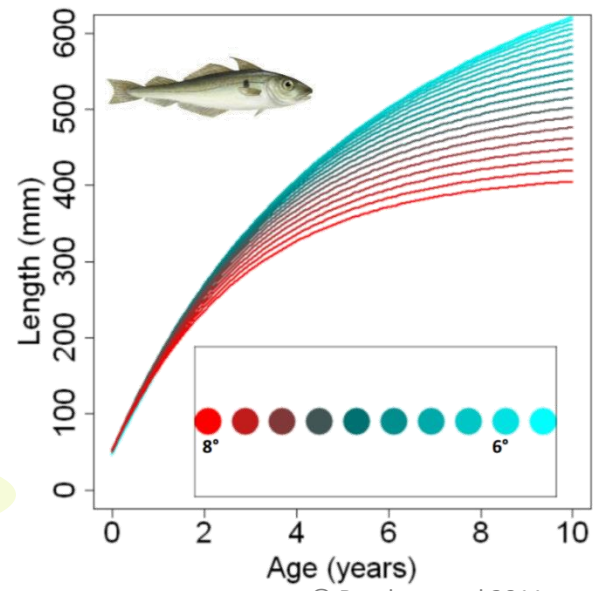

Natural mortality rates

Individual growth rates

Recruitment rates

Maturity rates

© Baudron et al 2011
Marshall (2020)

WP4 = ecological impacts

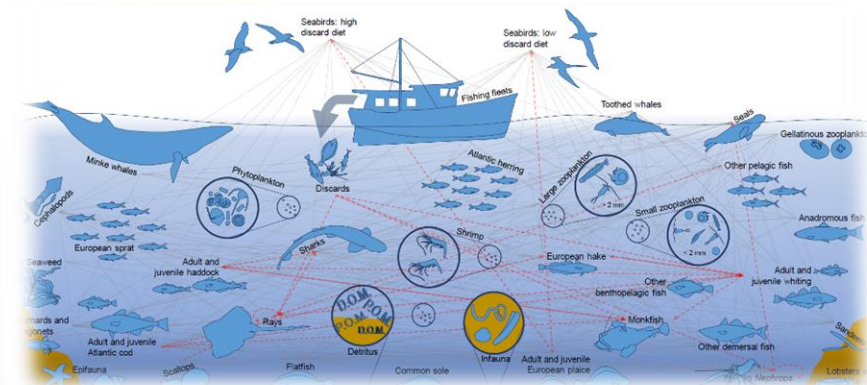

© Gönener

Bycatch of Protected Endangered Threatened species

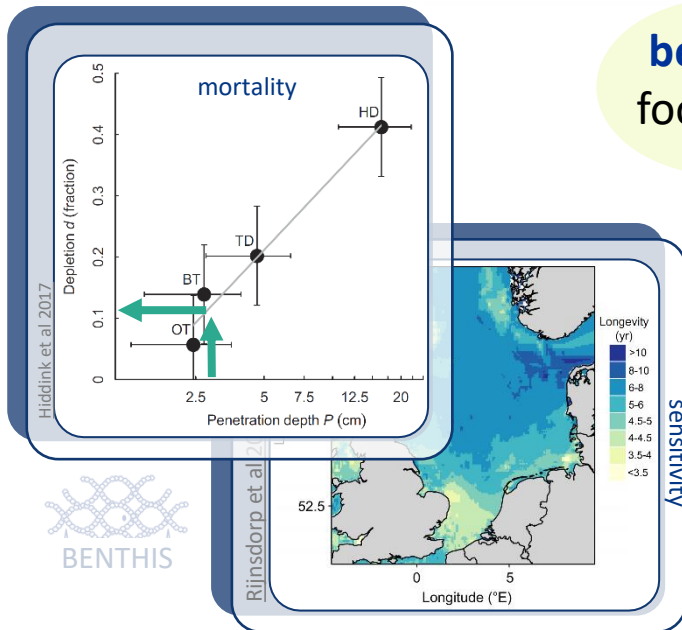

Fishing impacts on food webs

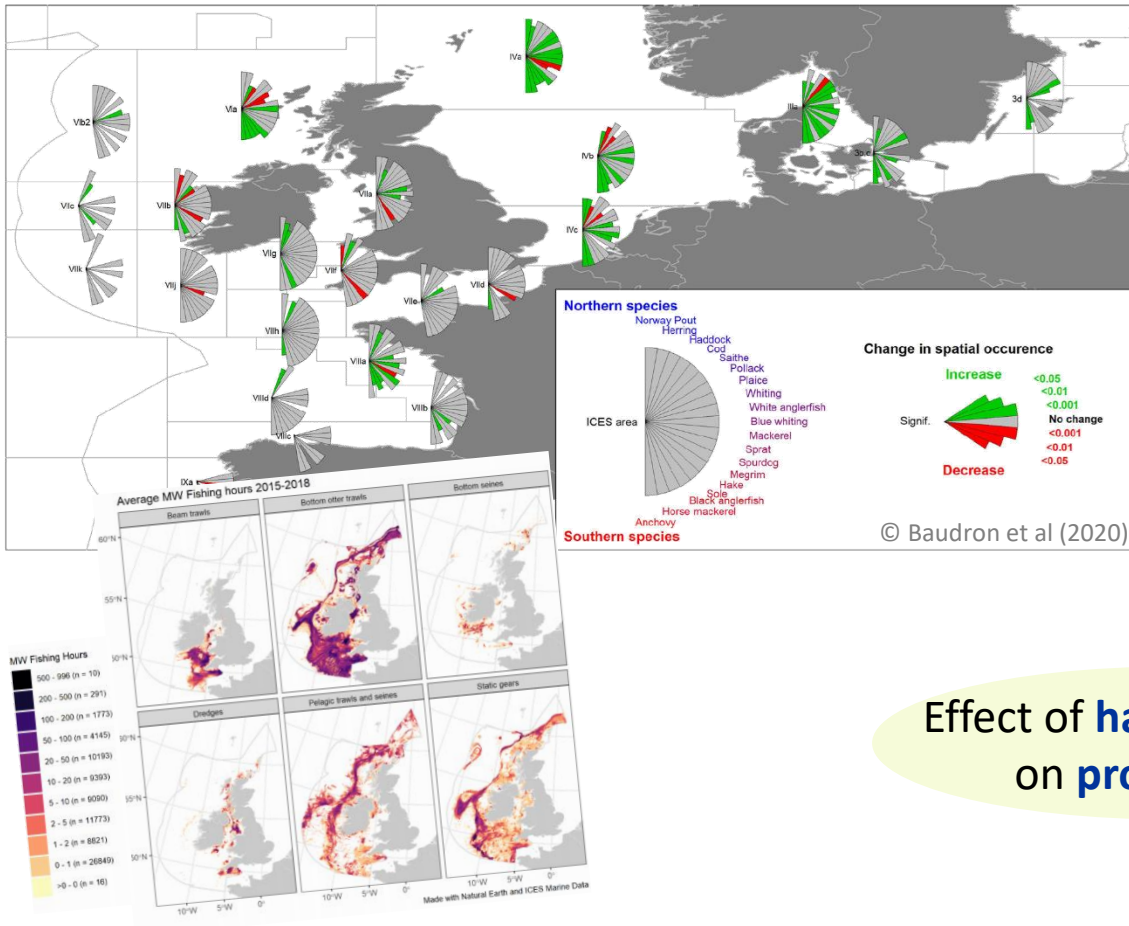

© Bentley et al (2018)

benthic footprint

litter footprint

WP5 = SPATIAL management

Spatial distribution of fish & fisheries

WP5 SPATIAL management impact on ecosystems and fisheries

WP2: fisheries as social-ecological system

Predicting the effect of changes in fishable area

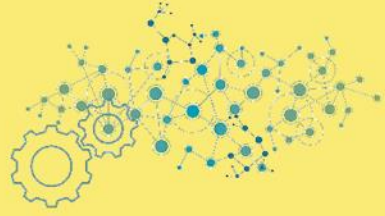

Effect of habitat changes on productivity

WP3: ecosystem change ON fish & health

- Effect of spatial and temporal closures, gear restrictions, selectivity changes
- Changes in productivity and its consequences to fish abundance and spatial distribution of fleets
- impact on stock management of *Nephrops*, sole, hake, haddock, cod, whiting, anglerfish, seabass, megrim...

WP6 = management & advice

WP6 Evaluation of fisheries management strategies

Integration of **social and economic** effects in predicting effectiveness of management

Integration of ecosystem change in **stock productivity**

Design and evaluation of **management strategies**

Targets and limits in relation to ecosystem change
